

DESCRIPTION

Nozzles with ring chains with interchangeable heads, for use in DN150-300.

MAIN FEATURES

They can be ordered in individual nozzle-head combinations or as a kit in a plastic case with nozzle, round head and with knives, a set of chains of different sizes, and keys for assembling the inserts and chains.

They are supplied with ceramic inserts as standard. They should always be configured with chains specially sized to the working diameter and used with a special centralizer.

RECOMMENDATIONS

For effective and efficient operation, the nozzles must be specially configured (with regard to the size of individual holes), depending on the characteristics of the pump (flow rate and pressure) and the cross-section, length and type of high-pressure hose. This information must be provided by the customer at the time of order and must be compatible with the technical specifications of each individual nozzle.

The operator must choose a working pressure compatible with the pipeline conditions: high working pressure values could cause structural damage to the pipe walls.

Maximum Pressure: 275 bar
