

## DESCRIPTION

Flushing device to be fixed on the steel suction pipe for washing and suction combined action.

## MAIN FEATURES

Medusa is a flushing device to be fixed on the steel suction pipe. At the same time it cleans the bottom and walls of the manhole and sucks the sediments.

It can also be used for hydro-excavation applications.

## RECOMMENDATIONS

For effective and efficient operation, the nozzles must be specially configured (with regard to the size of individual holes), depending on the characteristics of the pump (flow rate and pressure) and the cross-section, length and type of high-pressure hose. This information must be provided by the customer at the time of order and must be compatible with the technical specifications of each individual nozzle. The operator must choose a working pressure compatible with the pipeline conditions: high working pressure values could cause structural damage to the pipe walls.
